

AutoSummary

Save on costly manual agent notetaking

CXone Mpower AutoSummary delivers objective, reliable, and contextually accurate automated agent summaries.

Contact center agents who are required to manually summarize customer interactions often struggle to accurately and consistently capture the most important information about each interaction. Spending on average one minute per summary, and then multiplied over millions of interactions, this task is not only time-consuming, but costly to your organization.

Agents either place customers on hold to complete the summary, causing customer frustration and increasing the AHT, or they devote time after the call when they could be focusing on more value-driven tasks. If the most important facts about an interaction are missed or omitted, your organization is missing the opportunity to deliver a seamless experience.

Using an extensive array of purpose-built Al models delivered by out-of-the-box and GenAl technology, AutoSummary reduces costs, improves productivity, and provides relevant information to the next agent, enabling seamless customer experiences, causing experience levels in most industries to decline.

Benefit from 100% autimated notetaking

Improve agent productivity

Agents focus on the customer, not tedious notetaking

Reduce costs

Decrease after call work (acw) and average handle time (aht) and repeat contact

Boost CX and EX

Agents focus on the customer, not tedious notetaking

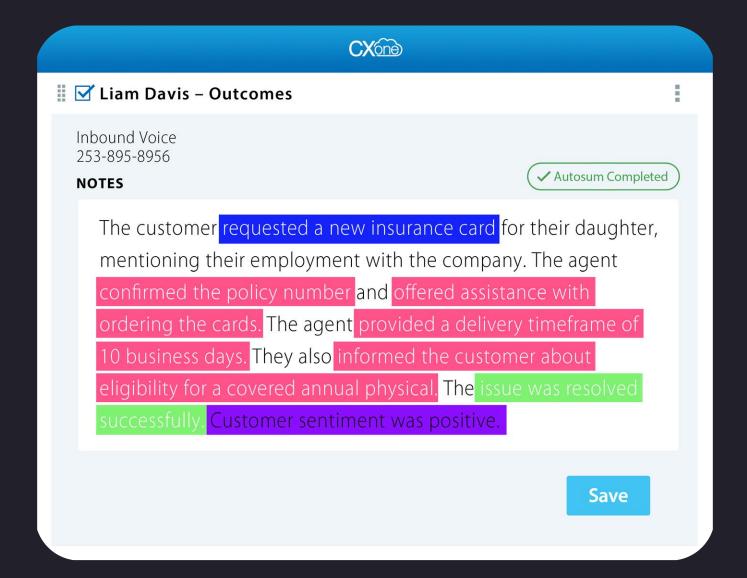

"AutoSummary's ability to accurately summarize what happens during every call is exactly what we have been waiting for. The agents also like that it saves them hours of manual typing over the course of a week."

Director of customer experience, healthcare provider

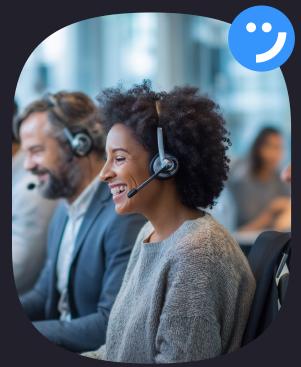

The agent dashboard display

Save time and capture meaningful, objective customer-agent information. View the data-driven narratives within seconds of each call.

Capture customer intent and integrate into your analytics program.

Deliver summarized actions based on structured Al and generative Al technology.

Identify key outcomes from Al-based models to monitor commitments. Agents can edit the notes if needed.

Measure customer satisfaction with Al-based sentiment scoring.

Realize cost savings

Improve operational efficiency with AutoSummary. It relieves agents from the time-consuming, inaccurate task of manual notetaking, providing substantial savings to an organization, as well as boosting customer satisfaction. Derived from 20+ years of industry experience using the most comprehensive and expansive interaction dataset in the world, these models predict the outcomes - resolution, escalation, churn risk, etc., - for each interaction with high accuracy. The results inform the next step of an interaction in the customer journey – whether it's hours, days, or months ahead – and create an overall better experience for your customers. Automate Agent Summaries with the power of GenAl AutoSummary's scalable solution analyzes calls in realtime using an extensive array of out-of-the-box, purpose-built Al for CX models. These models identify intents, actions, outcomes, and customer sentiment. This structured automated summary data is then processed using GenAl and delivered in a summary format seamlessly to the Agent application and/or a CRM system. Incomplete, scattered notes are suddenly turned into clear, concise agent summaries that save time and improve the customer experience.

Out-of-the-box solution

Realize immediate value, no training data models required

Deploy in any environment

Use with any CRM or transcription source

Built to scale with customer needs

Ability to ingest growing data sets for any industryrequired

Continuous improvement

Self-learning to meet both current and future needs

Drive complete performance

AutoSummary uses structured data to compose an objective analysis consistently for every interaction. As a result, it can be operationalized by other applications to provide exceptional experiences, including the ability to:

- Orchestrate the perfect customer journey
- Provide contextual information to the next agent to ensure a seamless journey.
- Optimize the complete performance
 Use summary data as part of a
 comprehensive analytics program to
 ensure promised actions and outcomes,
 such as callbacks, have been scheduled.
- Provide readily available agent summaries

Save time by eliminating agent CRM searches for previous summaries from past interactions with easily accessible notes.
