NEXIDIA & RELATIVITY
WORKING TOGETHER

Corporations, law firms, and government agencies have come to rely on Nexidia's patented phonetic Audio Discovery software to analyze, search, and review large volumes of audio and video content in a cost-effective manner.

Nexidia integrates with Relativity to give review teams the power to manage their relevant audio and video content directly inside Relativity's on premise discovery platform.

How It Works

- Nexidia-trained audio professionals work with you to assist in the collection and evaluation of your audio evidence. File types, call-logging systems, and metadata are among the factors considered before audio and video content is processed using Nexidia's award-winning, patented phonetic search technology. Nexidia's ability to quickly process large-scale audio

and video projects is unmatched, providing the fastest and most accurate searches across large collections of content. Once processed, your audio content is connected to your Relativity project and available for searching and review from within the Relativity application.

- Using the Nexidia Search custom search provider, your review team can quickly access search terms and phrases, jumping directly to the relevant section(s) for playback. Privilege, relevancy, and annotations are stored with the recordings for future reference.

- Within Relativity, Nexidia's custom audio/video player provides a visual depiction of the audio stream, including hits in addition to navigation buttons for jumping between hits or forward and backwards. A karaoke
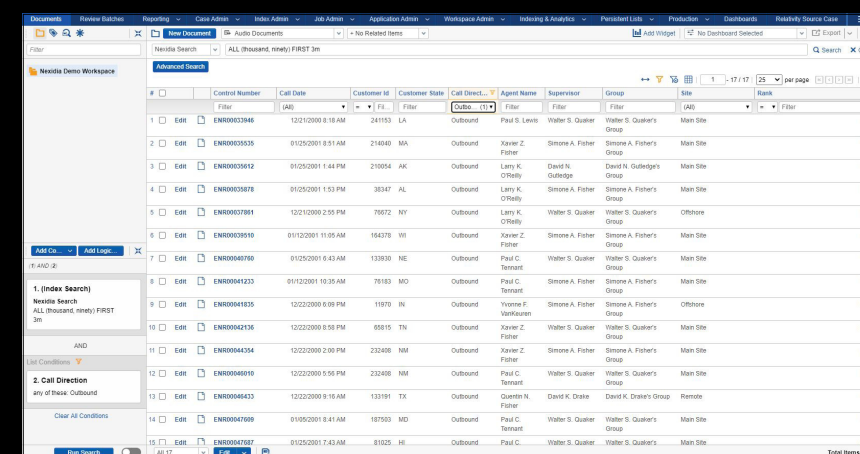

style transcript viewer displays the results of Nexidia's automated transcription synchronized with the audio. Also displayed is a list of the hits within the audio or video file and their associated scores.

## We're Working Together for You

The integration of audio/video into your eDiscovery platform is the next step in providing a single source for handling critical matters. Now, with the Nexidia search provider for Relativity and the Nexidia custom player, you can utilize the leading audio search technology seamlessly inside of Relativity. This provides greater efficiency and a single interface experience for your reviewers. With the integration of Relativity and Nexidia you have the two best eDiscovery technologies at your fingertips, all within a single review solution.

THE TWO BEST EDISCOVERY TECHNOLOGIES AT YOUR FINGERTIPS, ALL WITHIN A SINGLE REVIEW SOLUTION.

The Nexidia Search capability is available as a drop down within the standard Relativity document and search view:

Search, listen, annotate your audio and video content using Nexidia's advanced phonetic technology directly from Relativity:

Benefits of Nexidia and Relativity

- Nexidia's unmatched accuracy, flexibility and speed

- Relativity's award-winning platform

- Increased efficiencies through a single interface

The Power of Phonetics Inside Relativity

- The most accurate audio search directly within Relativity

- No speaker training or dictionaries required

- More than 40 languages supported

- Uniquely scalable
